

Semester 02 2025/2026

Subject : Application Development (WBL)
(SECP3106)

Section : Section 2

Lecturer : Dr. Seah Choon Sen

Task : Lab Assignment 2: Industry Project
Module Proposal

Due : 30th April 2026

Name	Matric No.
Brendan Chia Yan Fei	A23CS0211
Chew Chiu Xian	A23CS0061
Elijah She Yu Sheng	A23CS0073
Neo Li Xin	A23CS0253
Ng Yu Hin	A23CS0148

PROJECT BACKGROUND

Tadika Aqil Miqail, under the leadership of Principal Dr. Norhanisah Abdullah, currently employs eight teachers. Despite the manageable team size, the administration faces significant operational bottlenecks due to the lack of a centralized documentation system.

Currently, the process of managing teacher information, ranging from basic records and document storage to leave applications, daily duty assignments, and performance evaluations is highly fragmented. This manual or decentralized approach makes it time-consuming for the principal to retrieve up-to-date files, track leave balances accurately, ensure fair task distribution, and monitor training progress. To maintain a high standard of educational and operational excellence, the kindergarten requires a transition from manual record-keeping to a streamlined, digital infrastructure that integrates all administrative workflows into a single accessible platform.

The primary goal of this project is to develop and deploy **GENIUSAQILOS**, a comprehensive and centralized Teacher Management System tailored specifically for Tadika Aqil Miqail. This system aims to eliminate administrative redundancies and empower the principal to manage her staff efficiently.

TARGET USERS

The system is designed to serve three primary user roles at Tadika Aqil Miqail, each with distinct access levels and functional requirements.

User Role	Goal/Purpose	Responsibilities
Principal (Admin)	Oversee the entire kindergarten's operations	Managing teacher records, approving leave applications, assigning daily duties, and reviewing performance reports and training progress for all staff.
Technician	Support the kindergarten's daily operational issue handling.	Only handles assigned operational issues such as safety hazards, facility maintenance, school environment problems, and equipment-related reports.

Teachers / Employees	Manage their professional profiles and daily responsibilities efficiently	Updating personal information, submitting leave requests, viewing assigned tasks/duties, and tracking their own training hours and performance feedback.
----------------------	---	--

MANDATORY MODULES

The following modules represent the core technical baseline required for the **GENIUSAQILOS** application. Each module is assigned a lead member who is responsible for its development to ensure secure access and administrative control within the application.

Module 1: Login

Lead Member: Brendan Chia Yan Fei

Explanation: The Login module provides users with a secure, authenticated entry point. It focuses on identity verification for the Principal, Teachers, and Technicians to protect sensitive operational and personal data stored within the system.

Teacher Feature: User

Features	Description
Secure Authentication Entry	Teachers can securely log into their individual accounts using their registered email and password credentials.
Password Visibility Toggle	Teachers can toggle password visibility during entry to ensure accurate input.
Forgot Password Request	Teachers can request a password reset if they lose or forget their account credentials.

Principal Feature: Admin

Features	Description
Administrative Access Entry	The principal can log into a dedicated admin interface with elevated permissions to access overall kindergarten data.
Session Control	The system manages the principal's login session securely through session timeout and access control to reduce unauthorized account usage.

Technician Feature: Operational Admin

Features	Description
Operational Dashboard Entry	Technicians can log into their specific operational dashboard, granting them access only to assigned maintenance and operational issue tools while bypassing sensitive staff details.

Special Features

Features	Description
Role-Based Landing Redirect	Upon successful login, the system automatically detects the user's role and redirects them to their respective dashboard (User, Admin, or Operational Admin).
Failed Login Lockout	Implements security measures that temporarily freeze an account after multiple consecutive incorrect password attempts to block brute-force attacks.

Module 2: Registration

Lead Member: Ng Yu Hin

Explanation: The Registration module handles new user sign-ups with basic input validation. This ensures that all staff records are created accurately within the system from the very beginning, preventing fragmented data entry.

Teacher Feature: User

Features	Description
Submit Registration Request	New teachers can fill out a registration form to create their initial application profile.
Enter Basic Profile Credentials	Teachers can input their official email, full name, phone number, and establish a password.
Password Validation Criteria	The registration form provides real-time checks to ensure chosen passwords meet system strength requirements (e.g., character length, numbers).

Principal Feature: Admin

Features	Description
Review Registration Requests	The principal can view a queue of pending staff registration forms awaiting authorization.
Approve/Reject Registrations	The principal can approve legitimate staff sign-ups to grant them official database entry or reject unauthorized registration requests.

Technician Feature: Operational Admin

Features	Description
Report Registration Access Issues	Technicians can report registration access issues if users are unable to submit or access the registration form.

Special Features

Features	Description
Real-Time Email Availability Check	The system instantly verifies if a submitted email is already registered in the system database to prevent duplicate account creation.

Instant Onboarding Trigger	Once approved by the principal, the registration system automatically instantiates a new profile for the teacher in the database.
-----------------------------------	---

Module 3: Manage User

Lead Member: Elijah She Yu Sheng

Explanation: The Manage User module allows for the viewing, editing, or removal of user accounts. It implements strict role-based access control (RBAC) to ensure users only see features and database items relevant to their designated position.

Teacher Feature: User

Features	Description
View Own Account Information	Teachers can see their active account status, registration date, and current system role permissions.
Request Account Changes	Teachers can request system changes from the principal if their role or core profile settings require updates.

Principal Feature: Admin

Features	Description
View All Registered Users	The principal can access a master directory of all staff accounts registered within the GENIUSAQILOS system.
Edit User Roles and Permissions	The principal can update user roles when necessary, such as assigning a teacher account, principal account, or operational technician account, with proper confirmation and audit logging.
Deactivate/Remove User Accounts	The principal can suspend or permanently delete user accounts when a staff member leaves the kindergarten.
Search and Filter Users	The principal can quickly filter the master list of users by their active status, name, or system role.

Technician Feature: Operational Admin

Features	Description
View Assigned Operational Account Issues	Technicians can view account access issues assigned to them, such as login access problems related to operational use.
Report Account Access Problems	Technicians can report unresolved account access issues to the principal or development team for further action.

Special Features

Features	Description
Role-Based Access Control (RBAC) Guard	A strict backend security layer that blocks users from manually entering URLs to unauthorized views (e.g., preventing a teacher from opening user modification pages).
Audit Trail Logs	The module tracks and records whenever a user's account role is updated or modified, keeping an administrative history log for accountability.

INDUSTRY MODULES

The industry modules of GENIUSAQILOS are designed based on Tadika Aqil Miqail's daily teacher management operations, including teacher records, leave management, duty management, training tracking, performance evaluation, and internal reporting. These modules are designed for practical kindergarten use, so each feature must be simple, logical, secure, and suitable for daily use by teachers and administrators.

Module 1: Teacher Records

Lead Member: Brendan Chia Yan Fei

Explanation:

The “Teacher Records” module is designed to store and manage all teacher information in one centralized digital profile. This module replaces scattered manual records with a structured teacher database that can be easily accessed by the principal. It helps Tadika Aqil Miqail keep teacher information complete, updated, and organized.

This module stores teacher personal information such as full name, MyKad/IC number, gender, date of birth, address, phone number, email address, marital status, and emergency contact details, which are required in the project briefing. It also stores important teacher documents such as MyKad copy, passport photo, resume or CV, academic certificates, medical check-up report, and bank statement header.

Teacher Feature: User

Feature	Description
View Own Teacher Profile	Teachers can view their own profile information, including personal details, contact details, emergency contact, and document status. Teachers cannot view other teachers' profiles to protect privacy.
Update Editable Information	Teachers can update basic information such as phone number, email address, home address, and emergency contact details. Sensitive fields such as MyKad/IC number should not be changed directly by the teacher without principal approval.
Upload Required Documents	Teachers can upload required documents such as passport photo, academic certificates, medical check-up report, and bank statement header. The system should support common file types such as PDF, JPG, and PNG.
View Document Status	Teachers can check whether each document is Missing, Pending Review, Verified, Rejected, or Need Update. This helps teachers understand which document still requires action.
Receive Document Reminder	The system sends reminders to teachers when required documents are missing, rejected, or need to be updated.

Principal Feature: Admin

Feature	Description
Create Teacher Profile	The principal can create a new teacher profile when a new teacher joins Tadika Aqil Miqail. This ensures every teacher has an official digital record in the system.
View All Teacher Records	The principal can view the full list of teachers and access each teacher's complete profile.
Verify Teacher Documents	The principal can review uploaded documents and mark them as Verified, Rejected, or Need Update.
Track Incomplete Records	The system displays teachers with missing or incomplete documents so the principal can follow up.
Search and Filter Teachers	The principal can search teachers by name, MyKad/IC number, phone number, or document status.
Generate Teacher Record Summary	The system can generate a simple summary showing total teachers, complete profiles, incomplete profiles, and pending document verification.

Technician Feature: Operational Admin

The technician does not have access to Teacher Records because this module contains sensitive personal and employment-related teacher information. Access should be limited to the teacher's own profile and the principal's administrative view.

Special Features

Feature	Description
Profile Completeness Indicator	Each teacher profile shows a completion percentage such as 60%, 80%, or 100%. This helps the principal quickly identify incomplete teacher records.
Document Expiry Reminder	The system can remind the teacher and principal when time-sensitive documents, such as medical check-up reports, need renewal.
Document Review Status	Each uploaded document has a clear review status so teachers know whether the document has been accepted or needs correction.

Module 2: Leave Management

Lead Member: Ng Yu Hin

Explanation:

The “Leave Management” module allows teachers to apply for leave digitally and allows the principal to approve, reject, and monitor leave applications. This module reduces manual leave tracking and helps the principal manage teacher availability more accurately.

The system supports the leave types provided by Tadika Aqil Miqail, including annual leave, medical leave, unpaid leave, maternity leave, marriage leave, compassionate leave, umrah leave, haji leave, birthday leave, and half-day leave. The leave entitlements include annual leave of 8 days, medical leave of 14 days, unpaid leave of 8 days, maternity leave of 98 days, marriage leave of 5 days, compassionate leave of 2 days, umrah leave of 14 days, haji leave of 40 days, birthday leave of 1 day, and half-day leave of 2 days per month.

Teacher Feature: User

Feature	Description
Submit Leave Application	Teachers can apply for leave by selecting leave type, start date, end date, duration, reason, and supporting document if required.
Select Leave Type	Teachers can select from the available leave types such as annual leave, medical leave, unpaid leave, maternity leave, marriage leave, compassionate leave, umrah leave, haji leave, birthday leave, and half-day leave.
View Leave Balance	Teachers can view their remaining leave balance before applying. This helps prevent unnecessary applications when balance is insufficient.
Upload Supporting Document	Teachers can upload supporting documents such as medical certificates, official letters, or other proof depending on the leave type.
Track Application Status	Teachers can check whether their leave application is Pending, Approved, Rejected, or Need Correction.
View Leave History	Teachers can view their previous leave applications, including leave type, date, duration, status, and principal remarks.

Cancel Pending Leave	Teachers can cancel a leave application if the principal has not approved or rejected it yet.
Receive Leave Notification	Teachers receive notification when the principal approves, rejects, or requests correction for their leave application.

Principal Feature: Admin

Feature	Description
View Leave Applications	The principal can view all leave applications submitted by teachers.
Review Leave Details	The principal can review the selected leave type, date, duration, reason, leave balance, and uploaded supporting document.
Auto Leave Validation	The system can automatically check leave balance and operational conflicts, then provide an approval recommendation for the principal.
Reject Leave	The principal can reject leave applications and provide remarks explaining the reason.
Monitor Teacher Availability	The system shows which teachers are on leave on a selected date so the system can plan daily manpower automatically.
View Leave Calendar	Approved leave can be displayed in calendar format to help the principal identify teacher availability clearly.
Track Leave Balance	The principal can view each teacher's leave balance by leave type.
Generate Leave Report	The system can generate reports showing leave taken, remaining leave balance, leave history, and pending applications.

Technician Feature: Operational Admin

The technician does not have access to the Leave Management module because leave applications, leave balances, and approval decisions are confidential staff management matters. This module should only be accessed by teachers for their own leave records and by the principal for review and approval.

Special Features

Feature	Description
Leave Conflict Alert	The system alerts the principal when multiple teachers apply for leave on the same date, helping the principal prevent teacher shortages during kindergarten operation hours.
Auto-Deduct Leave Balance	Once the principal approves a leave application, the system automatically deducts the correct number of days from the teacher's leave balance.
Leave-Aware Duty Checking	If a teacher who has an assigned duty applies for leave, the system alerts the principal that the duty may need a replacement.
Substitute Duty Suggestion	The system can suggest available teachers based on leave status and current duty workload, but the final replacement decision remains under the principal's control.

Module 3: Task & Duty Manager

Lead Member: Elijah She Yu Sheng

Explanation:

The “Task & Duty Manager” module helps the principal assign, organize, and monitor teacher duties in a fair and structured way. This module is important because kindergarten teachers are not only responsible for teaching, but also daily operational duties such as student arrival, dismissal, cleaning, transition, and assembly.

The module supports the duty types required by Tadika Aqil Miqail, including cleaning duty, arrival duty, dismissal duty, half-full day transition duty, and assembly duty. It also supports detailed checklists for duty areas such as classroom, assembly hall, dining area, nap room and stairs, and toilet.

Teacher Feature: User

Feature	Description
View Assigned Duties	Teachers can view their assigned duties by daily, weekly, or monthly schedule.

View Duty Details	Each duty shows duty type, date, time, assigned location, checklist, and completion deadline.
Receive Duty Reminder	Teachers receive reminders before their duty time, so they do not forget their responsibilities.
Complete Duty Checklist	Teachers can tick checklist items after completing each required task.
Mark Duty as Completed	Teachers can submit the duty as Completed after finishing the checklist.
Add Duty Remarks	Teachers can add remarks if the duty cannot be completed due to missing tools, emergency, student-related issues, or other valid reasons.
Report Duty-Related Issue	Teachers can report problems found during duty, such as broken equipment, unsafe stairs, toilet issues, or cleaning tool shortage.
View Duty History	Teachers can view their own past duties and completion status.

Principal Feature: Admin

Feature	Description
Create Duty Schedule	The principal can create duty schedules for daily, weekly, and monthly duties.
Assign Teachers to Duties	The system can assign teachers to specific duty types, locations, dates, and time slots.
Edit Duty Assignment	The principal can update duty assignments when a teacher is absent, on leave, or when the schedule changes.
Manage Duty Checklist	The principal can create and update checklist items for each duty type and duty area.
Monitor Duty Completion	The principal can view whether each duty is Not Started, In Progress, Completed, or Overdue.
View Overdue Duties	The system shows duties that are not completed by the expected time.

Track Teacher Workload	The principal can view how many duties each teacher has received in a week or month.
Generate Duty Report	The system can generate reports showing completed duties, missed duties, overdue duties, and teacher workload distribution.
Create Duty-Related Issue Report	If a teacher reports a safety, facility, or school environment issue during duty, the system can forward the issue to the Teacher Reporting System and assign it to the technician after principal review.

Technician Feature: Operational Admin

Feature	Description
View Assigned Duty-Related Issues	The technician can view only duty-related issues assigned by the system, such as safety hazards, facility maintenance issues, or school environment problems.
Check Reported Facility Problems	The technician can check issues such as broken furniture, faulty lights, damaged doors, unsafe stairs, toilet problems, or classroom equipment damage.
Add Maintenance Remarks	The technician can add remarks explaining the issue, repair action, or further action needed. The technician can also upload photos as proof after checking or repairing the issue.

Special Features

Feature	Description
Leave-Aware Scheduling	The system prevents the principal from assigning duties to teachers who already have approved leave.
Overdue Duty Alert	The system alerts the principal when a duty has not been completed by the expected time.

Photo Proof for Selected Duties	For selected duties such as cleaning or maintenance-related tasks, the teacher or technician can upload photos as proof if required.
--	--

Module 4: Teacher Training Tracker

Lead Member: Neo Li Xin

Explanation:

The “Teacher Training Tracker” module records and monitors teachers’ professional development activities. This module helps the principal track whether teachers are attending training, submitting proper proof, and improving their teaching skills.

Teachers are required to submit training title or course name, training category, organizer, training date, training duration, training mode, venue or platform, and reflection. Teachers also need to upload certificates and training photos as proof of attendance. The training categories include Teaching Skills, Child Development, Safety and First Aid, Islamic Education, Classroom Management, ICT/Technology, and Others.

Teacher Feature: User

Feature	Description
Submit Training Record	Teachers can submit a training record after attending a course, workshop, seminar, or online training session.
Enter Training Details	Teachers must enter the training title, category, organizer, date, duration, mode, venue or platform, and reflection.
Select Training Category	Teachers can select a category such as Teaching Skills, Child Development, Safety and First Aid, Islamic Education, Classroom Management, ICT/Technology, or Others.
Upload Certificate/ Training Photo	Teachers can upload certificates as official proof of training completion. Teachers can also upload training photos as supporting proof of attendance.
Write Reflection	Teachers can write what they learned from the training and how it can be applied in their teaching practice.

Track Training Status	Teachers can check whether the training record is Submitted, Verified, Rejected, or Need Correction.
View Training History	Teachers can view their own training history, including training date, category, duration, proof, and verification status.

Principal Feature: Admin

Feature	Description
View Training Submissions	The principal can view training records submitted by all teachers.
Review Training Details	The principal can review the training title, organizer, date, duration, mode, category, reflection, certificate, and photos.
Verify Training Record	The principal can verify training records after reviewing submitted information and proof.
Reject Training Record	The principal can reject incomplete or invalid training records and provide correction remarks.
Track Annual Training Requirement	The system can track whether each teacher has met the minimum training requirement, such as at least three trainings per year. The system shows which teachers have not completed enough training or lack training in important categories.
Generate Training Report	The system can generate training reports by teacher, year, training category, training hours, and verification status.

Technician Feature: Operational Admin

The technician does not have access to Teacher Training Tracker because training submission, verification, and progress monitoring are handled by teachers and the principal only.

Special Features

Feature	Description
Training Progress Bar	Each teacher can view a progress bar showing progress toward the annual training requirement.
Training Category Gap Alert	The system alerts the principal if a teacher has not attended important training categories, such as Safety and First Aid.
Training Recommendation Tag	The principal can recommend suitable training categories for teachers based on their performance needs.

Module 5: Teacher Performance Tracker

Lead Member: Chew Chiu Xian

Explanation:

The “Teacher Performance Tracker” module helps the principal evaluate teachers using structured KPI categories and checklist-based scoring. This module ensures teacher evaluation is more consistent, transparent, and evidence based. It reduces the risk of evaluation based only on memory or opinion.

The KPI categories include Attendance and Punctuality, Classroom Management, Teaching Performance, Student Development, Documentation and Record Keeping, Communication and Professionalism, Task and Duty Responsibility, Creativity and Initiative, Training and Self Development, and Discipline and SOP Compliance. The briefing also provides detailed criteria such as arriving on time, preparing lesson plans, managing students, updating records, communicating professionally, completing duties, attending training, and following school SOP.

Teacher Feature: User

Feature	Description
View Released Feedback	Teachers can view performance feedback only after the principal releases it. This protects confidential evaluation information.
View KPI Score Summary	Teachers can view their score by category, total score, percentage, and performance level if released by the principal.

Read Principal Comments	Teachers can read comments from the principal to understand their strengths and areas for improvement.
View Improvement Plan	Teachers can view improvement actions suggested by the principal, such as attending training, improving punctuality, or improving documentation.
Track Own Progress	Teachers can compare current and past evaluations to understand whether their performance is improving.
View Related Training Suggestion	Teachers can see suggested training categories if the principal links performance weaknesses to training needs.

Principal Feature: Admin

Feature	Description
Create Performance Evaluation	The principal can create a performance evaluation for a selected teacher.
Use KPI Checklist	The principal can evaluate teachers using fixed KPI categories and checklist items from the kindergarten's evaluation criteria.
Enter Marks	The principal can enter marks for each KPI category or checklist item.
Add Evaluation Comments	The principal can write comments for each KPI category to explain the teacher's performance.
Auto-Calculate Score	The system automatically calculates total marks, percentage, and performance level.
Generate Warning or Misconduct Record	The principal can generate a warning letter or misconduct record when necessary, based on documented evaluation evidence.
Generate Yearly Performance Report	The system can generate yearly performance reports for each teacher.
Release Feedback to Teacher	The principal can decide when the evaluation result becomes visible to the teacher.

Link Training and Duty Evidence	The principal can refer to training records and duty completion records when evaluating related KPI categories.
--	---

Technician Feature: Operational Admin

The technician does not have access to Teacher Performance Tracker because teacher performance evaluation contains confidential assessment information. This module should only be managed by the principal, while teachers can only view feedback released to them.

Special Features

Feature	Description
Evidence-Based KPI Support	The system can refer to related data from other modules, such as duty completion, training records, and leave records, to support fairer performance evaluation.
Performance Trend Chart	The system can show whether a teacher's performance is improving, stable, or declining across evaluation periods.
KPI Weakness Detection	The system highlights the lowest KPI categories so the system can identify specific improvement areas.

Module 6: Teacher Reporting System

Lead Member: Chew Chiu Xian

Explanation:

The “Teacher Reporting System” module provides a formal channel for teachers to report workplace issues, safety concerns, facility problems, teaching material shortages, misconduct, and other operational matters. This module helps Tadika Aqil Miqail handle issues in a structured way instead of relying only on informal messages.

The reporting categories include harassment reports, bullying reports, staff conflict reports, SOP violation reports, workload concern reports, teacher misconduct reports, facility maintenance reports, teaching material shortage reports, safety hazard reports, and IT or equipment problem reports. This module is also suitable for supporting anonymous reporting, file upload, status tracking, and notification updates.

Teacher Feature: User

Feature	Description
Submit New Report	Teachers can submit a report by selecting report type, date, location, urgency level, and description.
Select Report Category	Teachers can choose report categories such as facility maintenance, safety hazard, teaching material shortage, workload concern, IT equipment problem, SOP violation, misconduct, bullying, or staff conflict.
Upload Evidence	Teachers can upload photos, screenshots, or documents as supporting evidence.
Submit Anonymous Report	Teachers can submit selected sensitive reports anonymously, especially reports related to harassment, bullying, staff conflict, or misconduct. Anonymous reporting should still generate a traceable case ID for follow-up while protecting the reporter's identity from normal users.
Add Report Location	Teachers can specify where the issue happened, such as classroom, toilet, dining area, stairs, assembly hall, office, or playground.
Select Urgency Level	Teachers can mark the report as Low, Medium, or High urgency so the principal can prioritize serious issues.
Track Report Status	Teachers can view whether the report status is Submitted, Under Review, Assigned, Action Taken, Resolved, Rejected, or Requires External Service.
Receive Status Notification	Teachers receive notification when the principal or assigned technician updates the report status.
View Own Report History	Teachers can view reports they submitted before and check their progress. For anonymous reports, the system can use a case ID instead of showing the teacher's identity.

Principal Feature: Admin

Feature	Description
View Submitted Reports	The principal can view reports submitted by teachers, including report type, description, location, urgency level, and uploaded evidence.
Review Report Details	The principal can review the report carefully before deciding the next action.
Update Report Status	The principal can update report status as Under Review, Assigned, Action Taken, Resolved, Rejected, or Requires External Service.
Assign Report to Technician	The principal can assign safety, facility, school environment, or equipment-related reports to the technician for follow-up.
Handle Sensitive Reports	Sensitive reports such as harassment, bullying, conflict between staff, workload concern, and teacher misconduct should remain under the principal's control.
Add Admin Remarks	The principal can add remarks explaining the action taken, reason for rejection, or follow-up instructions.
Filter Reports	The system can filter reports by status, urgency level, report category, assigned technician, and unresolved cases.
Generate Report Summary	The system can generate a summary showing total reports, pending reports, resolved reports, repeated issues, and common issue categories.
Monitor Technician Progress	For reports assigned to the technician, the principal can monitor whether the technician has checked, repaired, or escalated the issue.

Technician Feature: Operational Admin

Feature	Description
View Assigned Operational Reports	The technician can only view reports assigned by the principal. These reports should mainly involve facility maintenance, safety hazards, school environment issues, or equipment-related problems.
Handle Facility Maintenance Reports	The technician can check reported facility problems such as damaged furniture, broken classroom equipment, toilet issues, lighting problems, leaking pipes, or damaged doors.
Handle Safety Hazard Reports	The technician can follow up on safety-related reports such as slippery floors, unsafe stairs, exposed wires, damaged playground equipment, or unsafe classroom conditions.
Handle Equipment-Related Reports	The technician can handle reports related to school equipment, classroom tools, or basic IT equipment used in the kindergarten.
Update Action Taken	After checking the issue, the technician can update the action taken, such as Checked, Repair in Progress, Repaired, Cannot Repair Internally, or Requires External Service.
Upload Before-and-After Photos	The technician can upload before-and-after photos to show the condition before checking and after action has been taken.
Add Maintenance Remarks	The technician can write remarks about the problem, repair action, tools needed, or whether outside service is required.
Mark Assigned Report as Completed	The technician can mark the assigned report as completed after the issue has been handled.
Restricted Sensitive Report Access	The technician cannot view sensitive reports such as harassment, bullying, staff conflict, misconduct, or workload concern reports. These reports remain visible only to the principal to protect confidentiality.

Special Features

Feature	Description
Anonymous Case ID	Anonymous reports generate a case ID so teachers can track progress without revealing their identity.
Repeated Issue Detection	The system can highlight repeated issues, such as recurring toilet problems, repeated safety hazards, or repeated classroom equipment damage.
Before-and-After Photo Record	Facility and safety reports can include before-and-after photos to prove that action has been taken.

MODULE DISTRIBUTION

Module	Type	Lead Member
Login	Mandatory	Brendan Chia Yan Fei
Registration	Mandatory	Ng Yu Hin
Manage User	Mandatory	Elijah She Yu Sheng
Module 1 (Teacher Records)	Industry	Brendan Chia Yan Fei
Module 2 (Leave Management)	Industry	Ng Yu Hin
Module 3 (Task & Duty Manager)	Industry	Elijah She Yu Sheng
Module 4 (Teacher Training Tracker)	Industry	Neo Li Xin
Module 5 (Teacher Performance Tracker)	Industry	Chew Chiu Xian
Module 6 (Teacher Reporting System)	Industry	Chew Chiu Xian

This project work distribution considers both module continuity and balanced workload among the five team members. To provide a solid foundation for GENIUSAQILOS system, the Mandatory Baseline modules were split among three leads (Brendan, Yu Hin, and Elijah), enabling these essential features to be developed simultaneously with their corresponding industry modules.

We also allocated tasks to enhance development efficiency by pairing some tasks together: Brendan, Yu Hin, and Elijah each lead a mandatory module and a single industry module (Modules 1, 2, and 3) while Li Xin and Chiu Xian are solely focused on the industry-specific tasks. This approach ensures that each team member has a clear focus, avoids the burden of a

single developer handling too much work, and allows for a designated owner for each module to help track the module in NexLab.

CONCLUSION

By the end of the semester, this team aims to provide **Tadika Aqil Miqail** with a comprehensive and integrated Teacher Management System.

The primary **operational bottleneck** currently faced by the kindergarten is the lack of a centralized documentation system, which results in fragmented management of teacher records, leave applications, and task assignments. This manual approach creates a significant time-consuming burden for the principal when retrieving files, tracking leave balances accurately, and monitoring professional development.

By proposing three mandatory technical modules and six industry-specific modules, the system is expected to address these bottlenecks by centralizing teacher records, digitalizing leave and duty management, and supporting data-driven monitoring of teacher training and performance.

Through this project, this team aims to support Tadika Aqil Miqail's transition from manual record-keeping to a streamlined digital infrastructure that improves record accessibility, administrative efficiency, and long-term operational management.
